

## Modernization Kit No. 4750211 Cascade Flushing System for Rinser Section

We are pleased to offer an improved external flush for all bottles prior to entering the rinser section. Two rows of bottles are lifted so that the bottle shoulders are clear of pocket necks while passing through two continuous water curtains that span the entire width of the machine. This feature allows an unobstructed cascade of water to pass over the bottle exterior and provide a superior rinse

This system may be adapted to Model 12, Model 14, and System 40 Bottle Cleaners. Since Barry-Wehmiller maintains a comprehensive database of all the equipment in the field, we are able to accommodate the specific requirements of your machines.

Please contact our Barry-Wehmiller Customer Service Department for details.
