

Modernization Kit No. 4750110 **Four Finger Pick-Up Loader**

The Four Finger Pick-Up Loader Modernization Kit is available for certain applications where an increased bottle loading rate is desired for the Model 14 Bottle Cleaner. The four finger pick-up loader permits the load table to operate at one-half the speed of the two finger pick-up loader. This provides the ability to increase the loading rate while reducing acceleration and velocity in the loading area.

Application of the four finger pick-up loader is made on a selective basis following an engineering evaluation of the desired operating requirements. For your convenience, each kit will include pickup arms, a pusher shaft, pusher noses, sprockets, chain and fastening hardware. The services of a Barry-Wehmiller Factory Trained Field Service Technician are recommended for installation of this modernization kit.

Our non-metallic sawtooth pickup arm reduces the chance for bottle damage during the loading process. Crown, shoulder and heel damage resulting from metal-to-glass contact is eliminated while achieving gentler bottle handling and quieter operation.

This new feature may be adapted for Model 12, 14, System 40 or 100 Bottle Cleaners that have an existing four finger load table. Installation time is minimized since disassembly of the load table is not required.

Barry-Wehmiller maintains a comprehensive database of all the equipment presently in the field, we are able to accommodate the requirements of your specific machines.

Please contact our Barry-Wehmiller Customer Service Department for details.
