

Modernization Kit No. 4750212 Oil Bath Speed Reducer

We are pleased to offer a newly designed speed reducing gearbox capable of handling much heavier loads than previous versions.

This reducer is equipped with hardened gears capable of higher capacities and greater safety factors. The extra gear hardening assures longer reducer life with increased time between overhauls. They are built to withstand heavier loading than reducers currently installed on many Model 12, Model 14, System 40, and System 100 Bottle Cleaners.

Pint washers above 40 pockets wide, 36 wide pint quart washers, and any machine which is subjected to prolonged production runs is the best candidate. It is available as one complete unit or as a part kit for field conversion of existing units. It is also available for installation in all the different positions: Load, Intermediate, and Discharge.
