

## Modernization Kit No. 4750218 Power Jet Package

Barry-Wehmiller now offers a modification to existing Power Jet assemblies that will prevent seal failure due to overlubrication and allow easier overhaul access. This modification provides the following:

- Grease Pressure Relief Valve - prevents over lubrication by allowing the grease to escape the cavity through the valve before pushing out the grease seals.
- Shaft Modifications - positive seal and bearing placement simplifies installation.
- Retaining Rings - holds the mechanical seal and two grease seals in place.

This modification requires complete power jet disassembly and machining of the body and shaft. The factory will completely overhaul the power jet and make the changes necessary to incorporate this modification. Send your power jet to Barry-Wehmiller for modification and a factory overhaul.
