

Modernization Kit No. 4750205 & 4750206
S.S. Rinse Rack & Caustic Rack Assembly

Barry-Wehmiller offers the newly designed stainless steel rack assembly to retrofit existing bottle cleaners. Each rack consists of a stainless steel frame with draw bar, lift pad, manifold pipes, plugs and our non-metallic, high strength centering cups.

The new design allows the areas between the cups to be open permitting debris to fall through and ultimately reduce downtime for maintenance. Conversion to the stainless steel rack results in a decrease in component weight and thus a reduction in drive system wear.

Our new racks adapt to Model 10, 12, 14 and System 40 Bottle Cleaners for use in the rinser and hot hydro sections. Since Barry-Wehmiller maintains a comprehensive database of all the equipment in the field, we are in the best position to accommodate the customers' specific needs and requirements.

Please contact your Barry-Wehmiller Customer Service Department for details.
