

Modernization Kit No. 4750347
Aluminum Treadplate Top Covers

Aluminum Treadplate Top Covers are now available to replace your existing covers. Top covers, being located directly above the sprays, are subject to all elements of corrosion. Painted covers demand periodic maintenance such as scraping, wire brushing and repainting to prolong service life.

Significant savings can be realized since aluminum Treadplate Top Covers require none of the maintenance mentioned above. The diamond tread configuration of the aluminum top covers provides a non-skid walking surface which promotes safety to operating and maintenance personnel.

Aluminum Treadplate Top Covers may be retrofitted in all Barry-Wehmiller Pasteurizers.

Please contact your Barry-Wehmiller Customer Service Department for details.
