

Modernization Kit No. 4750348
Stainless Steel Grate Bed Assembly

The standard Pasteurizer Walking Beam is constructed of many stainless steel strips supported by galvanized steel grate angles and I-Beam assemblies. The galvanized coating protects the grate angles and I-Beam assemblies for many years. However, when the galvanizing deteriorates, scraping, wire-brushing and painting are then necessary to prolong service life. Surface preparation and painting are made difficult by the limited access and many small areas of the structure.

Walking Beam service life can now be greatly extended by installing stainless steel grate angles and I-Beam assemblies. Major savings in maintenance and/or replacement costs could be realized since these parts would require none of the maintenance previously mentioned.

Stainless steel grate angles and I-Beam assemblies can be retrofitted in all Barry-Wehmiller pasteurizers.

Please contact your Barry-Wehmiller Customer Service Department for details.
